Topics:

➤ **Middle School Assembly- 45-60 min...** In this presentation middle-school students learn that cyberbullying is not acceptable under any circumstances, and that any type of bullying is a serious matter. They also point out how cyberbullying is actually much easier to document and track than other forms of bullying and therefore is often more likely to lead to consequences. In addition, they encourage victims of cyberbullying or those who witness cyberbullying to talk to an adult they trust.

➤ **Educator Briefing: Beginner**
(60-75 minutes) This presentation is designed to bring educators up to speed on the Internet-related issues facing adolescents today that may impact their classrooms. It covers a basic overview of the online technologies utilized by children and teens, and provides numerous real-world examples of cyberbullying that help to stress the seriousness of this problem. If you don't know much about cyberbullying (or even technology), this is the presentation for you.

➤ **Cyberbullying for Educators: Advanced**

(60-90 minutes) For those who already know what cyberbullying is, Drs. Hinduja and Patchin offer several presentations that dig into the information more deeply. They spend the majority of the time focusing intensely on one of the following topics: Cyberbullying Prevention, Responding to Cyberbullying, Legal Issues for Educators, and *Social Networking and Sexting*. In addition to these areas of emphasis, advanced presentation can be customized to the needs of your district.
